Average number of household members (people)	4.61
Percentage of female household heads	15.83

About 50 % of Woman is very poor, and almost 16% of responsible as solo household heads

Food Waste in Jakarta, Indonesia

With 300 kilograms of waste per capita per year, Indonesia is the second-largest food waster in the world, according to the 2017 Food Sustainability Index. And to make matters worse, awareness on food loss and waste in Indonesia is low. As the world remains gripped by the COVID-19 pandemic, the risk of food loss and waste is escalating for a number of reasons, including disruption in supply chains, transportation restrictions and quarantine measures.

It's time for Rebalancing Food Distribution

We can help! Food Pantry for Food Distribution

Do you know that annually, we waste 1,3 billion tons of food? An amount that is enough to feed 3 billion people. 3 billion people can be fed from the food that we waste, meanwhile around 925 million of the world's population are starving. Hence, theoretically, if we have zero food waste, we might be able to eliminate world hunger.
